RN-to-EMT Bridge Course

Our RN-to-EMT Bridge program is for the Advanced Healthcare Providers (RN, MD, NP, PA, DO, CRNA, Etc.) who are looking to obtain certification as an Emergency Medical Technician. The RN-to-EMT Bridge Program is presented in a ten (10) week format which will allow for online program completion, as well as a hands-on practical lab skills session, with weekly meetings which can be viewed on your schedule. This program provides a more intense learning experience but allows for the student to complete all EMT certification requirements, adding to the knowledge already gained with their respective career programs. This program allows you to utilize your foundation in healthcare, to bypass the 200+ hour traditional EMT course, and complete the training needed to successfully pass the National Registry of Emergency Medical Technicians Cognitive and Psychomotor Examinations

For more information, follow the QR code to be placed on the interest list for details, updates and registration info when posted
